The Spot Healing Brush The Spot Healing Brush is used to edit pixelated areas in a photo and restore spots and wrinkles in pictures. When you click this tool in the Tools panel, the brush appears with a crosshair. You can adjust the size of the brush in the drop-down menu (refer to Figure 3-3). You can also adjust the opacity of the brush by using the Opacity slider in the Brush panel. To use the tool, click where you want to edit the area (if it doesn't cover the whole object) and then drag on the spot where you want to fix the problem. The image preview will show the brush cursor as you drag the brush over the spot to be fixed, and you can correct the problem with the brush. To fix an area, simply click the pixels to fix the problem. When you click the spot, you see the selected area turn gray, which means you've selected the area. You can then adjust the brush opacity by using the drop-down menu in the Brush panel or by using the slider in the Brush tool's panel. You may have to click the pixels a couple of times to complete the correction. You can edit a selected area by using the Select tool and moving the selection area around. Simply click

Youth consciousness in the Sri Lankan asylum-seeker economy Aden, Yemen. It is important to clarify the term "asylum" before moving on. In the eyes of international law, an asylum seeker is someone who flees war or persecution and seeks protection from his or her country of origin. It does not mean that the asylum seeker has found safe haven in the country where he or she seeks refuge; nor does it imply that the asylum seeker has found decent conditions of life there. The asylum seeker is often exploited, brutalised or even tortured in the country where he or she has fled, and the processing of his or her refugee application is subject to political dynamics and local legislation. Since my third semester of University, I have been working as a voluntary community-pilot in the public transportation system in Colombo, Sri Lanka's capital. I've done this to learn about transport policies, social inclusion and youth engagement in developing and developing countries. This project has given me a unique opportunity to understand how the asylum-seeker economy works. Colombo is a chaotic city, and the transition from normal Sri Lankan conditions to police state-like conditions is common for students. During evenings, nights and weekends, most colleges in Colombo are frequented by aggressive groups of young men from Muslim and Tamil land, armed with knives, guns and even meat cleavers. The problem is best described in the following ways: The police act as the enforcers of the gangs, and the gangs act as the sole rulers in the city for hours on end. The public transportation system in Colombo has been rendered useless as there are no proper controls. In the absence of a proper governance system, the city is plagued with physical and psychological forms of violence. Despite our long educational history, the current generation of young Sri Lankans does not respect the law. The vast majority of the kids I know in the city arrive unkempt, unshaven, and looking like drug addicts. This is how international perceptions of Sri Lanka start. When visiting Sri Lanka for the first time, even seasoned travellers have difficulties navigating the city. Because it is not necessary for the young men to maintain their hygiene, most of them regularly wear "biharis", the traditional Sinhalese dress. Without many of the necessary motor vehicles, it is impossible for people to get around unless they own a motor-bike. In the absence of public transport,

Trabecular bone loss in estrogen-deficient postmenopausal women with or without type 2 diabetes: effects of glucose control. We evaluated the effects of long-term tight control of glucose on trabecular bone loss in postmenopausal women with type 2 diabetes. We compared 24 women with type 2 diabetes on insulin with 28 women with type 2 diabetes on oral hypoglycemic agents (OHAs) matched for age, years since menopause, years on OHA, body mass index, estimated glomerular filtration rate, use of antihypertensive drugs, and history of previous menopausal hormone therapy with and without osteoporosis. The bone mineral density (BMD) of the lumbar spine and radius was measured by dual x-ray absorptiometry. Glucose was tightly controlled in both groups (mean glucose 6.4 +/- 0.2 and 6.2 +/- 0.3 mmol/l in the two groups, respectively). Patients receiving insulin had significantly higher BMD than patients receiving OHAs (-3.3 vs. 0.8%, respectively; P < .001). Click to view. The first day of 2011 brings with it a double threat. After all, on this date in 1858, Abraham Lincoln was elected President of the United States, and the struggling young band Megadeth released its debut album, Killing Is My Business... and Business Is Good!. In honor of the occasion, we at Consequence of Sound have counted down the top 30 Megadeth songs of the 21st century. (Disclosure
