This former farmhouse has a cosy, old-world atmosphere with a warm welcome at every turn. Botak's guest rooms are the perfect retreat for a stay in the heart of the beautiful Viersen region. Choose from a variety of air-conditioned rooms, each individually furnished, and designed with style and comfort in mind. Superior and Deluxe rooms also include a flat-screen TV and free internet access. Every morning and afternoon, a delicious breakfast is served in the farmhouse's cosy, inviting restaurant. All accommodation is equipped with a kettle and cups, a hair dryer, shower, bath tub, bath sheets and towels, toiletries, blankets and a hairdryer. The house features a sauna and massage facility, and guests can benefit from complimentary tea and coffee throughout their stay. Q: dynamically reposition div without flicker/jerk? I have a requirement where the clients can dynamically resize the div (via drag+drop) and I need to reflect the new div size to the other div. I have achieved this by having the div positioned absolute and the new width/height computed, and then changing the CSS transform on the DIV to scale to the new size. I do this for IE11 because IE11 doesn't support transforms as part of CSS3 and the div's dimensions are measured on the element position, which is calculated by the browser to the pixel value which is transformed to the CSS value by the browser. This works very well in IE11 and the transforms are smooth and perfect but in any other browser the animation can be a little jerky and flickery. Here is an example Thanks a lot for your help! A: You can use the threejs library, which supports drag and drop as well. If you head to Cherrywood, you'll be greeted by the Montaukian, a loner from Six Foot who just so happens to be the only moderator for the hotel. She tends to prefer to avoid interaction
