

We all know what an icon is, and most of us have seen them on websites and applications. But, what are the good sites that have great icons? How can you make your own icons or download free icon sets? And, if your current icons have a "good look" to them, how can you make them look better? This is a question that most of us are quite interested in. We all like to have great looking icons in our applications and web pages, and so we've written this program to make it happen. Not only do you get a tool that will help you compile a huge library of web page icons, but you also get a tool that will help you generate icons by converting any.GIF to.PNG file format.

How to Create Icon Sets: Icons are the small graphics which represent a thing in an application or computer. They can be of different sizes, and a set of icons are referred as an icon pack. An icon set can also be used to represent a set of applications or even a site. What you get with Icon Bank is a collection of Windows icon sets. A Windows icon set is a collection of icon (like the ones that are used to represent a program, etc.) that you can use to represent icons for your own programs and websites. So, with Icon Bank you can use a Windows icon set to make your own icon set. Why do you need Icon Bank to make your own set of icons? Why would you want to make your own set of icons? The answer is simple. A lot of programs use Windows icon sets to represent the icons used in their programs. With this program you can download, convert, edit, and use the icons in their Windows icon set. A major downside to using a Windows icon set is that it makes using their icons very difficult. Because they have a set of icons for a program, you can't use a different one for each program you use. It would be nice to be able to use an icon set for a program you use, but have another icon set for another program. And, in case you don't have an icon for a program, you can use a free icon generator to create one. When you install Icon Bank you will be able to browse and download Windows icon sets. With that set up, you can use Windows icon sets in your own applications. There are lots of different Windows icon sets available. If you use these programs often,

The keymacro.dll used by Icon Bank is the only GUI macro recorder that is completely free, open source, and not a demo. This program is a complete replacement for "Alternate Mouse Button" (a.k.a. Macros for PC's with no Mouse). Although it does not offer as much functionality as some of the other Macro programs, it is free and open source. Unlike most Macros for Windows, MACRO KEY has NO command line support. Instead, it integrates perfectly with Windows with an easy to use interface that even beginners will find easy to use. The design and layout of the interface were purposely built to allow the user to find and record as many macros as possible. MACRO KEY does require access to the Windows API, the same access that is required for Keyboard Shortcuts and context menu Menus.

Icon Bank Description When it comes to icons, Icon Bank is a useful and complete solution. Unlike most collections that use.DLL or.ICL files to store the icons, Icon Bank stores them in local.htm files. This is because most of the programs used to compile icon libraries can only save them in 16 colors and so the icons themselves come out looking a little "bleached". The icons in Icon Bank are all a brilliant, 256 colors and are ready to use. Icon Bank comes with gobs of great features and over 5,000 beautiful Windows icons neatly organized into 54 different categories. Support for editing, external plugins, drag and drop, search, bookmark, background color previewer, importing, cool MIDI jukebox, and much more.
