Character animators will love the new Typen. A rapid replacement for Adobe Flash, Typen is a digital canvas system much like Illustrator, or is at least intended to fit within Illustrator's workflow. Typen is browser-based, so you can use it from any computer, plug-in or tablet. It also features many of the same filters Illustrator does; particularly the Smudge and Burn tools. Like Illustrator, Typen also requires the purchase of a Creative Cloud subscription. The only downside for many users is that it is still in beta. Typen user support is basic, and those still learning it or who have difficulties with it sometimes feel ignored by Adobe. The next big change could be in the works. In his keynote, Mr. Hall of the Adobe Max conference, the company's annual marketing meeting, Mr. Sweeney mentioned a major change, in some way or other, is coming, perhaps as early as August. I'm happy overall, but would love to see some more usability enhancements in Lightroom's brush tool. The most useful brush tool for me (and I guess the most common) is the soft-focus brush. Settings like opacity are useful if you want to simulate softer focus, but having it automatically changes as you adjust the opacity is probably useful for most people. Also, there are a couple of interesting features that could be implemented in the brush tool, like having the tool scale as you or your camera do. That could be pretty handy. I love to post my images, but I hate editing them! I was hoping Photoshop version 11 would have happened with the third version that can be used for editing. But for Photoshop version 11 I was also waiting for the built in RAW converter. And sadly it wasn't released. This is just me being impatient, but I do think it would've been a great feature for Photoshop version 11. But oh well, I'll just have to wait till Adobe make a new version with this feature.

Many of you will have already heard of the concept of Shopify if you are an entrepreneur. In my day to day work, I'm really loving how much Shopify brings to the table. I've sat down and created a Shopify store, so I can only imagine how big it would be if I chose to run this website off this platform. While this has nothing to do with the Adobe Creative Cloud, it does illustrate the power these platforms are bringing to the table. Unlike the previous article where I mentioned that Adobe seemed nervous about adding raw GPU process capabilities to the web, this article shows the Adobe team is very far from a complete solution; however, they are there. Face Painter is available now, and users can pick up the software for \$299.95. While other Adobe products such as Lightroom, Illustrator, and InDesign have access to both online and offline collaboration features, Photoshop does not. That means, no one can collaborate on your work online--it has to be synchronized from your desktop. Plus, it means a lot of information is still stored on your computer--all of your layers, presets, and other useable data is kept there. Photoshop's downtime means losing access to your files whenever you need to make changes to a document that's not saved locally. For some pro users, this is an annoyance, while other pros sometimes find the process annoying. It is, however, no longer a hurdle for Adobe's latest product; the company is now offering web-based collaboration via Sovereign Online Creative Suite software, a web-based solution for high-level collaboration on Photoshop documents, InDesign documents, Illustrator documents and nearly 500 other Adobe products. It has witnessed an unbreakable progression where a simple image editing software has witnessed a change with the passing of time. And the changes have been so significant that no one has the urge to junk it. This has made it the perfect tool for all Photoshop-related skills.
