I had to get a hold of new contractors in Vancouver, Canada to do the "special effects" on my home. It turned out to be done on a $2 000 system, but it worked and did the job well. We have 5 kids now and our home is off limits to the kids. We have to protect them so I put all of our important documents onto 8x10 inch papers, then took as many as I could into a room that contained a DLP projector into which I'd slot the slides, a keyboard and a mouse. Adobe is pushing developers to use the new Flash Builder 4.6, and looking forward to having vendors and developers participate in the public beta program for the product. Other developers have said that they're looking for a 4.6.1. Flash Builder 4.6 is released today for free. Adobe says developers can read all about the new features and capabilities. Since then, I've reluctantly moved on to the $25 Adobe Creative Cloud. It's not a requirement, but I've found that full artistic control when working on a project means I can better visualize what I'm doing and I can work for longer periods. As with any software update, you're going to run into some bugs, and this update has some real bugs. The culprit here is the XML editor, which can't unlock a locked CC symbol. There are reports that it was fixed in 5.0.1. There are two issues right now. The first issue is that the.psd file 'opens in place'. Not at all what I expected. The second Open issues is that there are a couple of.Adobe less critical issues with products that I use, and those are the only issues that I could really find. Then again, I only ran this on a MacBook Pro 12°, and it does run faster on at least Windows 10.

"Adobe will be able to manage licensing and activation through the Actions menu," said Martin Milner, evp, product marketing. "This will allow users to license up to one million impressions per year, which is more than the cost of a Lightroom plug-in. We want to offer Adobe products at a low price, but the actions menu will keep the price down while maintaining a great offering." Designers looking to create their own custom Photoshop Actions and Photoshop plug-ins can build their own code using Adobe's new Actions API and work with Adobe plug-ins. That will make it possible to connect to Photoshop in more ways, extending the power of the program to users via third-party apps and plug-ins. In such a tool, designers could even create a plug-in that captures an image from the clipboard and then sticks it to an image on the canvas. Photoshop CS6 also marks the launch of Auto Fix, a new Photoshop feature that automatically detects problems common to digital images and offers fixes. With Auto Fix, users can easily correct a variety of issues, including uniform black and white tones, clipped objects, and skewed or oddly textured lines with a single click. Auto Fix combines retouching with many of Photoshop's most powerful tools and Action features to create an often elusive but essential part of a composite image. Users have often lamented the limitations of the original copy-paste support in Photoshop, but with Photoshop CS6, Adobe has finally addressed that deficiency. Copy-paste support was also enhanced by adding the ability to collapse layers. Users can now freeze a group of layers for later insertion or edit, and then unfreeze them.

The application has been made easier to use, and it's even easier to get organised. New features in Photoshop include the ability to create and store drafts of documents, and create and save linked files. Working with linked files is one step closer to collaborative editing. You can choose to have the same file in multiple locations, which is useful if you want to swap between versions and change your mind mid-edit. The file explorer window can be hidden if it's not needed, and the New Layer dialogue box has been simplified and made more clear. And then there's the exciting new facial recognition feature. With its new "Identify" feature you can identify faces in a picture, and get near-perfect results—even in images that you haven't touched in a while. You can also add small pieces of text or symbols to identify people easily. Other new features make it easier to see the difference between different file types in edit mode, and undo and redo is now faster using smart assist technology whenever you need to edit an image. As an alternative to Photoshop for those who are looking for an affordable way to improve their graphic design skills, Adobe Photoshop Elements provides great value for money. It allows you to create great looking documents, scrapbook layouts, catalogs and more, with the help of dozens of preloaded templates. You can also add your own photos, graphics and text to create a dazzling design. Adobe Photoshop is the powerhouse of graphic design and there are lots of cool new features which will be exciting for users of all levels. It does, however, have a steep learning curve and is typically very expensive. Elements on the other hand is for those looking to save money as it's far simpler to use and cheaper than the professional version. Unfortunately, Elements does not provide as many design tools as the professional service.
